

FREE-FORM Measuring Sheet

1. Make a template of your spa - (measurements in mm)

Spas that have an odd or non geometric shape can be constructed from a template that you supply.

Templates can be made of strong builders plastic, cardboard or even an old bed sheet.

Mark out the exact size and shape that you wish the cover to be made to. Mark which side of the template faces up, so that we don't make it upside down.

Mark any relevant information about sizing, control buttons etc directly on the template.

2. Choose one lip style and provide measurement

3. Choose options

What colour would you like your cover?

What type of cover would you like?

- Cover Superior Plus by Pinz (Level 3)
 Cover Superior by Pinz (Level 2)
 Spa Cover by Pinz (Level 1)

Would you like your cover hinged in the middle (standard) or separable (2 piece)?

- Hinged - standard Hinged - cut long*
 2 Piece

*Refer to diagram and description in the Pinz "Measuring Guide" (can be found on page 2 of this document)

Note: depending on the size of your spa cover, hinged option may not be possible or your cover may need to be made in more than 2 pieces - we will confirm this prior to production.

Do you have control buttons on the top lip of your spa that are over 25mm high?

- No
 Yes (you will need to provide details of position and size of these buttons - attach a separate page and diagram with measurements if necessary)

If you know the make and model of your spa, that information can be useful:

Make Model

I have read, understood and followed the Pinz "Measuring Guide" (can be found on page 2 of this document)

4. Provide your contact details

Measuring your spa

- only required where make and model are unknown

Measuring your spa

Measuring your spa is not difficult, with a little patience and help from a friend you will have accurate measurements in no time. Please ask your retailer for a Pinz measuring sheet that is specific to your spa's shape.

What you will need:

1. You will need two or three straight edges approximately one metre long any object with a straight edge, piece of wood, plastic or metal will do.
2. A tape measure with metric units.
3. Somebody to hold the other end of the tape for you (it is also a good idea to have this second person double check all your measurements).

The measurements that we ask you to take allow us to mathematically cross check your measurements for errors.

Which measurements?

As few as three measurements may be required for your particular shaped spa, once again it is highly recommended that you ask your retailer for a Pinz measuring sheet that is specific to your spa's shape.

Mandatory measurements

1. Length and breadth of your spa - it is important to check that your spa has the same length and breadth even if it looks the same - round spas too!
2. Lip style & height of the lip - all spas are not the same.

Other measurements

3. Length of sides - any spa with more than four sides will need to have the lengths of all sides measured.
4. Radius of corners - any spa with rounded corners will need to have the radius measured. This is the most difficult of all measurements. Please ask for advice if you have difficulty with this measurement. Please refer to the definition of an extended corner and diagram No.4 for more information. When the measurement is less than 100mm the cover may be made with a squared off corner.
5. Position of controls - if you have control buttons that are over 20mm high the foam core will need to be modified to allow the cover to sit flush. Mark their positions from a corner to the centre of the button on the measuring sheet provided by your retailer.

Definition - Extended Corners

When a spa has a curved or radius corner, the extended corner is where the sides would meet had the corner not been curved.

Definition of Hinge/Join

Some spas are rectangular, i.e. the length and breadth are not equal. In this case the join or hinge can go one of two ways. If you require other than standard please let us know on your measuring sheet.

Cut short - standard Cut long - non standard

Measuring length and breadth 1

Measure across the spa, outside edge to outside edge. Use an upright ruler to allow for any flare in the lip.

Refer to the section on direction of hinge/join when these two measurements are not the same.

Lip style & height of lip 2

Use the diagrams to work out what lip style you have - this will help us work out what type of straps to include.

Use a ruler or straight edge to measure the length of the skirt required on your cover.

Length of sides 3

Measure using straight edges from extended corner to extended corner (this measurement is not required on all spas).

Radius of corners 4

Measure from the extended corner (i.e. where the sides would meet if the spa were square) to where the spa touches your straight edge.

Position of controls 5

Required only where controls over 20mm high are located on the top lip of your spa. You must measure buttons from an extended corner to the centre of the button. Draw all buttons over 20mm high on the measuring diagram and their measurements from a corner to their centre.
